

Most user-input errors happen because users are not pasting a recipe URL at all

Post-2/19 failed-URLs analysis of user_input_error entries only (n = 988).

What users are entering instead of a recipe URL

Blank 44.2%

Search terms 25.8%

Email 11.1%

Malformed URL 10.7%

Domain only 8.1%

Examples by bucket

- Blank: ""
- Search terms: chicken, goulash, strawberry dump cake
- Email: ccabylis@gmail.com
- Malformed URL: https//liveloveandsugar.com
- Domain only: eatingwell.com, allrecipes.com

Stakeholder takeaway

This is not mainly an email problem. The biggest issue is that many users are not attempting to paste a valid recipe-page URL at all.

What this points to

- Disable save on empty submit
- Prompt clearly for a recipe page URL
- Show tailored validation for emails, search terms, domain-only inputs, and malformed URLs
