

Recipe Clipper insights

The core save experience improved across success, speed, and friction reduction.

Average daily save attempt success rate

40.5% -> 47.2% -> 52.1%

+11.6 pts vs baseline

Baseline 12/18-1/30 -> transition 1/31-2/18 -> post-mid-Feb 2/19-3/18

Average save-click time

5.1s -> 4.7s -> 3.8s

-1.3s vs baseline

Lower is better

~25% faster

User error rate

37.4% -> 30.1% -> 24.5%

-12.9 pts vs baseline

Share of save attempts ending in user_input_error

~35% lower

- The transition period includes the Feb 9 addition of 126 supported sites
- External-brand share reached 85.3% post-mid-Feb, confirming the intended clipping use case
- Use the three-phase view for KPI progression, and use 2/19 onward as the cleanest error-attribution read
