

Recipe Clipper KPI framework with launch-to-date actuals

Uses launch-to-date totals and whole-period rates from the export, rather than the post-mid-Feb snapshot.

Recommended north-star

Not in current export

Successful saves per active user Closest launch-to-date actuals: 8,545 successful saves and 51.1% launch-to-date save success rate.

1. Adoption

- 23,680 Add Recipe clicks
- 16,739 Save Recipe clicks
- 209 average Add Recipe clicks per 100K sessions
- Gap: % of active users starting a save is not in the current export

2. Value delivered

- 8,545 successful recipes saved
- 51.1% launch-to-date save success rate
- 0.10% average share of all MYR saves from Recipe Clipper
- Gap: successful saves per active user is not in the current export

3. Experience quality

- 4.66s average save-click time
- 25.8% launch-to-date user error rate
- 6.9% launch-to-date product error rate
- 3.2% launch-to-date external/domain error rate

4. Coverage constraints

- 81.7% external-brand share of successful saves
- 92.1% of external errors are unsupported sites
- 1,909 Supported Sites clicks
- 529 external/domain failures

Launch-to-date counts come from the exported Total row. Time-based averages and share metrics use the exported Average definitions unless analytics confirms a different preferred method.
