

Recipe Clipper KPI framework

Measure the product across adoption, value delivered, experience quality, and scale constraints.

North-star metric

Successful saves per active user

Best single whole-product KPI because it combines real usage with delivered value — stronger than raw click volume alone.

1. Adoption

1.

- Add Recipe button clicks
- % of active users who start a save
- Save Recipe button clicks

2. Value delivered

2.

- Successful recipes saved
- Successful saves per active user
- Share of all MYR saves from Recipe Clipper

3. Experience quality

3.

- Save URL success rate
- Average save-click time
- Error rate by type

4. Coverage constraints

4.

- External-brand save share
- Unsupported-site rate
- Supported Sites engagement

Headline KPIs: Successful saves per active user, Save URL success rate, Share of all MYR saves from Recipe Clipper. Diagnostics: Add Recipe button clicks, Avg save-click time, unsupported-site / user / product error mix.
